Use this table to supply data for Criterion 4.2.

Performance Indicator	Definition																								
1. Student Learning Results	A student learning outcome is one that measures a specific competency attainment. <i>Examples of a direct assessment (evidence) of student learning</i> - If for any given performance measure your goal is being exceeded repeatedly, consider either increasing the goal or changing the performance measure - For all data reported, show sample size (n=75).																								
Analysis of Results																									
Performance Measure: For each assessment, identify the following - 1. Academic Program, 2. Student Learning Outcome, 3. Measurable Goal	What is your measurement instrument or process? Do not use grades. Indicate type of instrument (e.g. direct, formative, internal, comparative)	Current Results: What are your current results?	Analysis of Results: What did you learn from your results?	Action Taken or Improvement Made: What did you improve or what is your next step?	Provide a graph or table of resulting trends (3-5 data points preferred)

In total, 72% (37 of 51) of students completing the report met the criteria.</p>	<p>Results indicate a higher percentage of students in the online course section met the expected outcome when compared to the percentage of students meeting the expected outcome in traditional sections, indicating the need for collaboration between full-time and adjunct faculty to define the rubric measures. Students need additional instruction in research practices.</p>	<p>The program chair will collaborate with all faculty to ensure consistent project expectations, rubric utilization, and method of evaluation.
